

Before you go up in an aerial lift,
be sure you know how to go

UP RIGHT!

RIGHT SETUP

Completely inspect the lift and set it up on firm, level ground.

RIGHT TRAINING

Every person who operates the lift must undergo comprehensive training conducted by a qualified instructor.

RIGHT WEATHER INFORMATION

Always have access to real-time weather data, especially wind speed and direction, and the possibility of lightning.

RIGHT SAFETY CONTACT

Designate one person within your department who will be responsible for enforcing safety protocols, and who has the final say on if lifts can be used.
